

Coffee Shop Sales Analysis Report

This project focuses on analyzing coffee shop sales data using Microsoft Excel. The dashboard helps understand customer behavior, product performance, sales trends, and store-wise revenue insights through Exploratory Data Analysis (EDA).

Project Objectives

- Analyze total sales performance
- Track customer footfall
- Identify peak ordering hours
- Find top-selling products
- Compare store performance
- Create an interactive dashboard

Tools & Technologies Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Conditional Formatting
- Excel Functions

Dashboard Preview

Key Insights

- Coffee products contributed the highest revenue.
- Morning hours generated maximum customer orders.
- Friday experienced the highest customer volume.
- Hell's Kitchen store achieved the best sales performance.
- Espresso products were the highest-selling items.

Business Recommendations

- Increase inventory during peak hours.
- Focus promotions on top-selling products.
- Improve marketing for low-performing products.
- Optimize staffing during high customer traffic.

Conclusion

This project demonstrates practical skills in data cleaning, data visualization, dashboard creation, and business analysis using Microsoft Excel.
